

VERSION 5.0

JULY 10, 2023

# MEMBERSHIP MANAGER PRO

INSTALLATION AND USER GUIDE

PRESENTED BY: WOJOSCRIPTS

[WOJOSCRIPTS.COM](http://WOJOSCRIPTS.COM)

Thank you for your purchase! If you have any questions that you feel should have been in this document, please log in using the account used to purchase the file and email via my user profile page contact form there. Thanks!

For questions on basic HTML, JavaScript or CSS editing - please give your question a quick Google or visit W3Schools as theme issues get top priority.

---

## REQUIREMENTS

Please ensure your web host meets the application requirements. The lists of requirements are:

### Web Server Requirements

- Operating System: Linux, Unix, or Windows
- Web Server: Apache
- Scripting Language: PHP 8.2 or above
- Apache mod\_rewrite
- Multibyte string
- INTL extension
- PHP GD library
- Database: MySQL 5.5 or above (PDO driver enabled)

If you're unsure whether your server meets these requirements, simply ask your hosting provider.

---

## INSTALL

Unzip the MMP package into your local hard drive. If you don't have WinZip, you can download it for free from <http://winzip.com>.

Using an FTP program (such as Filezilla, which is free, or a commercial package such as CuteFTP), login to your web server and copy the MMP files across into your base website directory. This directory is commonly called 'public\_html', 'html', 'www' or 'httpdocs'. If you're not sure what it is, your webhost provider will be able to tell you.

## WEB SERVER REQUIREMENTS

MMP requires the following files/directories to have 'write' permissions set. If you're running on a Linux or UNIX web host, you can use your FTP program and use the 'CHMOD' ('Change Mode') function to grant writes permissions.

If your host is running Windows, you will need to contact your hosting provider about setting up write permissions on these files/folders.

Folders, CHMOD these to 755:

- /uploads/
- view/admin/cache /
- view/front/cache/

**NOTE: ALTHOUGH IT SAYS 755, SOME WEBHOSTS MAY REQUIRE 775 OR 777 INSTEAD.**

## MYSQL DATABASE

MMP makes use of a MySQL database to store your data. This database must be created before you run the MMP installation wizard. Your MySQL user account should also have full grant access to that database.

You will need the database connection details during the setup wizard.

Setting up your database may differ with your webhost and what software they use for your web hosting control panel. If you don't know how ask your hosting provider.

## SETUP WIZARD

MMP includes a simple 3 step installation process. To start the setup wizard, navigate to the directory that you uploaded MMP, for example: <http://www.example.com/>.

The MMP setup wizard will appear. Follow simple on screen instructions.

---

## WHATS NEW?

V5.0 is complete and full rewrite. Every single file is modified in order to support latest php, mysql jQuery etc...

Due to those massive changes upgrade at this time is not possible for few reasons:

1. Passwords are now being hashed in users table, vs sha1() older method. This adds security to user accounts, and it is impossible to decrypt passwords even if someone can gain access to your database.
2. Brand new framework is introduced (virtual routing) something similar to MVC pattern, except model is not being used. Only controller and view.
3. New debugging console, which is a must for any developer trying to troubleshoot errors in PHP environment. To enable console, open up /lib/config.ini.php file and set DEBUG to true.
4. New framework is faster more secure, and uses lot less memory and resources.

## NEW FEATURES

- New front and backend design.
- Added page creation, with assignable memberships
- New calendar mode in admin dashboard
- Stripe (recurring payment added).
- Detailed sales statistics per membership and per user.
- User history (previously purchased memberships).
- User permissions assignable admin permissions.

---

## HELP

Please see help section (Admin panel) for different methods of page protection and redirect.

If you want to include your protected and non-protected pages within existing framework, please follow this simple tutorial.

As you may have noticed system pages are being accessed using virtual routing, something like <http://yourdomain.com/dashboard/>

Even though folder “dashboard” does not exist anywhere within MMP directory.

Let’s add one page as part of framework and call it “news”

1. Open up index.php and search for “//Custom Routes add here”
2. Right below add:

```
$router->get('/news', function () use ($tpl)
{
    $tpl->template = 'front/news.tpl.php';
    $tpl->title = "News Page";
});
```

Note: Make sure that route names are unique in this case word “news” is unique and it’s not being used anywhere else.

3. Go to /view/front/ and create a blank file and name it **news.tpl.php**
4. Edit /view/front/news.tpl.php and at the very beginning add:

```
<?php
if (!defined("_WOJO"))
    die('Direct access to this location is not allowed.');
```

Right below you can add your own html/php code or membership based protection

5. Now you can access your page like <http://yourdomain.com/news/>

---

## CONFIGURATION PAGE

### WEBSITE NAME

The name of your web site, which is displayed in various locations across your site.

### SITE DIRECTORY

Directory where MMP is installed. This field is auto populated during initial install, and it should not be changed unless you're moving whole site into different directory.

### PAYMENT CONFIRMATION EMAIL

If left empty default site email will be used instead.

### REGISTRATION VERIFICATION

If Yes users will need to confirm their email address and go through activation process.

### AUTO REGISTRATION

If Yes, once registration process is completed users will be able to login. If No Admin will need to manually activate each account.

### REGISTRATION NOTIFICATION

Receive notification upon each new user registration.

### OFFLINE PAYMENT INFO

Enter your offline payment information. Such as bank account, swift etc. Once payment is received, you can manually assign membership to a client.

### DEFAULT MAILER

Default mailer is PHP. Some hosting companies will disable this feature on shared hosting. If you're not able to receive emails, try switching to SMTP, or Sendmail method.

---

## ICONS

You can view full list of icons, by opening `/view/admin/fonts/wojoicons.html`

Icon shortcode:

```
<i class="icon agenda"></i>  
<i class="icon align center"></i>
```

---

## CACHE FOLDER

When modifying css files do not change anything in **/view/admin/cache/** or **/view/front/cache/**  
Instead modify individual css files located in **/view/admin/css/** or **/view/front/css/**

Cached file **master\_main.css** will be automatically updated.

---

## SETTING UP FILE DIRECTORY

1. To configure file directory first you need to find out your root directory. There are several ways of doing it, and MMP has that feature built in.

Go to **/admin/system/** and under CMS info tab find Root Path entry:

Your path might look like : **C:\public\_html\MMP\** or **/home/user/public\_html/mmp/** depending on your OS.

2. Next step is to create folder outside of your publicly accessible directory in:

**C:\public\_html\downloads\**, or **/home/users/downloads/**

3. Now that we have our secure folder, we need to enter new path in admin configuration page under File Directory field. Make sure you use the following format: **C:/public\_html/downloads/** or if your OS is Linux based: **/home/users/downloads/**

Now you can start uploading file.

During testing you can enable debug console, which will provide info about any errors you might encounter. Open up **/lib/config.ini.php** and set **DEBUG** to true.

Make sure to disable it once done troubleshooting

---

## SETTING UP CRONJOB

Make sure to set up a cronjob on /cron/cron.php. Run it every day using (wGet) just before midnight. Cron job will automatically remove expired memberships Stripe recurring, email notifications etc...

If you don't know how to use CronJob, please contact your hosting company.

---

## SOURCES & CREDITS

Images included in preview are for demonstration purposes only. Some photos can be purchased separately. (If needed, particular links can be given at your email request).

In downloaded product folder placeholders might be used instead of real stock images.

Thank you for purchasing this script!
